

EasyPave permeable paving tray system

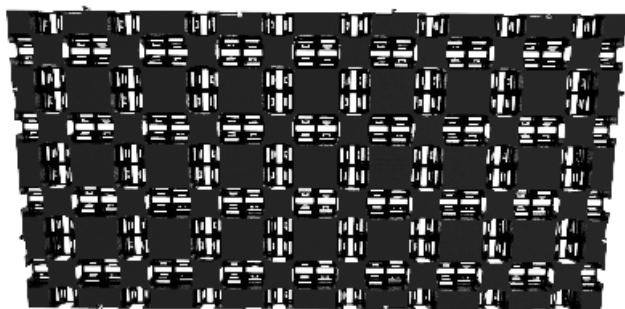

EasyPave is a sub-pavement tray that can be placed beneath paving, patio, or other types of flooring, to make these areas SUDS-compliant. The tray can also be used under shed bases to act as an effective water drainage solution and strong supportive system.

The sub-pavement tray is manufactured in the UK to ISO9001 Quality Standards. It is made from durable polypropylene, making it robust and very strong, yet lightweight. Easy to handle and install, this is the solution to your paving needs.

Our Permeable Paver System with electrical cabling added

Nominal size: 1000 x 500 x 38mm

Weight: 2.4 kg

Channels for electrical cables, pipework or reinforcing bars

Panels are easily clipped together laterally for installation. Can also invert and clip to another panel for a doubly strong structure

Made from durable polypropylene

Will take a load in excess of 150 tonnes/sqm

Manufactured from recycled plastic and recyclable at end of use, these are made in the UK to ISO9001 Quality Standards

Component of a Garden Building Base or Green Roof System

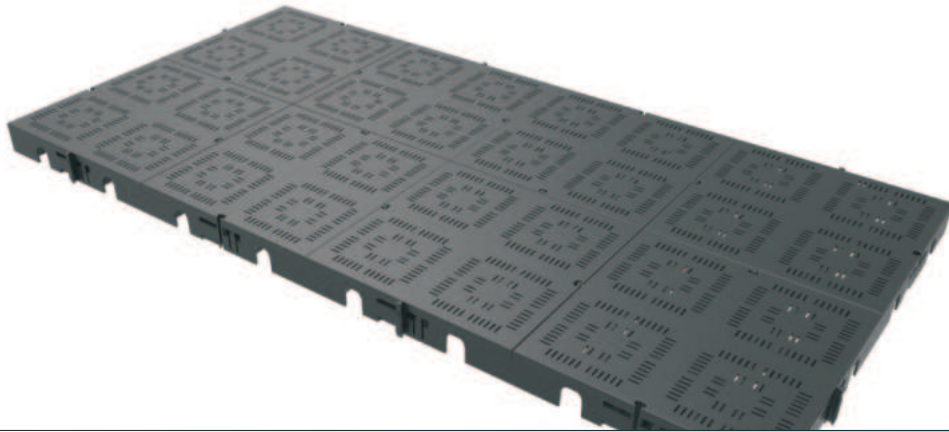

EasyPave can be used as the drainage and base layer of a Green Roof System, with the geotextile membrane and base layer placed above the tray.

The system allows for efficient drainage and a supportive base for bedding layers containing organic plant or artificial grass material.

The system can also be used as a base for outdoor structures such as portacabins, sheds, summerhouses, garden offices, jacuzzis and outdoor saunas.

The channels allow for pipework and reinforcing bars to be added, as well as electrical cabling, enabling you to incorporate sound and lighting into any garden building,

Exhibition Flooring

Our new version of EasyPave is ideal as a component of exhibition flooring and as a base for marquees. The top surface is stiletto-friendly while very small holes allow for efficient drainage, perfect for reducing the maintenance required for cleaning up spilled drinks or if the weather takes a turn for the worse.

The system is also flame-retardant, meeting Health and Safety standards for exhibition halls, and can be double-stacked for added strength.
