

MARKER POSTS

Used for the easy location and maintenance of chambers housing valves installed by the utility companies

The Marker Posts are yet another product in the Pennine range that offers great advantages over their concrete counterparts in cost and efficiency.

Lightweight. Manufactured from recycled plastics, these are lightweight, so can be easily handled, transported and installed.

Eco-friendly. All plastics involved are recycled and are recyclable at end of use.

PRODUCT CODE	PRODUCT HEIGHT
POST50	500mm
POST73	730mm
POST99	990mm
POST123	1230mm

Low-maintenance. A natural grey in colour, the posts are durable with no maintenance required. They are graffiti-, splinter-, weather-, UV-, corrosion- and rot- resistant.

Robust. As well as the aforementioned features, they contain a galvanised steel tube of 20mm outer diameter and 2.5mm wall thickness, which connects the head (where there is a pocket capable of holding an aerial) to the base. This provides a protected duct to connect an aerial to underground telemetry and confers added strength, durability and cable protection.

Versatile. Suitable for use in a range of applications, including fire hydrant, gas, cable, air valve, sluice valve, water meter and PRV ones, and have preformed holes to accept marker plates. If needed, they can be cut to length on-site using a hand wood saw.
